پریپرگ

Before conception &
throughout pregnancy

INGREDIENTS	STRENGTH	THERAPEUTIC INDICATION
L-Arginine as HCl	100mg	Improves blood flow and circulation to the uterus, thicken the endometrium, aiding in the implantation of an embryo and the likelihood of a successful pregnancy. Increases egg quality by increasing the blood supply to the ovaries.
Inositol	50mg	Helps regulate ovulation and hormone levels in people with PCOS and insulin sensitivity.
Beta-carotene	3mg	Taking beta-carotene before, during, and after pregnancy might decrease the risk of diarrhea and fever after childbirth.
Vitamin D3	15mcg (600IU)	Vitamin D helps in fertility, endometriosis and polycystic ovary syndrome.
Vitamin E	4mg	Vitamin E is a natural antioxidant. It helps increase the chances of conceiving. It also helps to boost fertility by helping the fertilized egg stay attached to the uterine wall.
Vitamin C	90mg	Increased Vitamin C appears to boost fertility. It promotes iron absorption and production of the fertility-critical hormone progesterone, and helps to trigger ovulation. Vitamin C can also help to regulate your menstrual cycle and ovulation
Vitamin B1	8mg	Vitamin B1 plays an important role in maturation of oocytes (immature egg cells).
Vitamin B2	5mg	Riboflavin plays an important role in metabolizing fats, proteins, and carbohydrates into energy
Vitamin B3	20mg	Niacin is an important part of vitamin B complex as tissues in the body convert niacin into a usable coenzyme called nicotinamide adenine dinucleotide (NAD), which is used in the body to perform essential functions.
Vitamin B6	10mg	Vitamin B6 helps in boosting fertility by balancing level of hormones estrogen and progesterone, it can help increase the chances of conceiving. It makes your uterus more receptive to the factors of pregnancy.
Vitamin B9	400mcg	Folic acid increases progesterone levels and lowers the risk of irregular ovulation. It reduces the risk of having a baby with a neural tube defect. It also lowers the risk of preterm birth and low-birth-weight babies.
Vitamin B12	20mcg	Vitamin B12 reduces the risk of loss of the fetus.
Vitamin B7	150mcg	Biotin is also necessary for a healthy pregnancy. Biotin prevents health issues in developing babies.
Vitamin B5 as Calcium D-Pantothenate	6mg	Vitamin B5 relieves from stress hormones and pregnancy-related muscle cramps. It also helps to produce essential pregnancy hormones.
Magnesium as Oxide	60mg	Magnesium is not only important for increasing the chances of a successful pregnancy, it can also improve the health of baby. It helps with ensuring the right amount of blood flow to the uterus. It is also crucial for the production of progesterone. Proper magnesium intake can prevent premature birth, help prevent certain birth defects.
Iron as Ferrous Fumarate	14mg	Iron during pregnancy reduces risk for premature birth or a low-birth-weight baby (less than 5 ½ pounds).
Zinc as Sulphate Monohydrate	15mg	An adequate supply of zinc is necessary for the oocyte to form a fertilization-competent egg.
Copper as Cupric Sulphate	1000mcg	Copper helps form red blood cells and baby's heart, blood vessels, and skeletal and nervous systems.
Selenium as Sodium Selenite	50mcg	Selenium is essential for reproduction, and DNA production.
Iodine as Potassium Iodide	150mcg	Women need extra iodine while they are pregnant to produce enough hormones to support the healthy development of the fetus.
